EDUCATION

ABES ENGINEERING COLLEGE

B.TECH IN COMPUTER SCIENCE AND ENGINEERING

CGPA: 8.5

Expected July 2027 | India

SKILLS

Languages

C • Python • HTML • CSS • SQL • Javascript • TypeScript

Frameworks and Libraries

React • Next.js • Express.js • Node.js • FastAPI • Prisma

Tailwind CSS • Drizzle ORM • Remix

Databases

PostgreSQL • MySQL • Redis • Firebase Firestore

MongoDB • Supabase

UI and Styling

Tailwind CSS • Radix UI • Headless UI • ShadCN UI

GSAP

Content and Rendering

MDX v2 • Markdown Processing • Remark • Rehype

APIs and Authentication

RESTful APIs • GraphQL • JWT • Clerk • Stripe

Tools and Platforms

Git • Github • Vercel • Netlify • Cloudinary • Resend

OPEN SOURCE CONTRIBUTIONS

GFGXELIXIR | NEXT.JS, GSAP

- Led frontend development of **Stellaris**, a **national-level hackathon** website, managing **8+ person team** through **task allocation**, **mentor guidance**, **code reviews** and **PR approvals** across the full build cycle.
- Migrated animation system from **AOS to GSAP**, resolving z-index and visibility conflicts across **8+** UI sections, reducing animation jank and achieving consistent cross-browser rendering.

DEW PLAYER | NEXT.JS, TYPESCRIPT, CLERK

- Diagnosed and fixed video and subtitle upload failures in a browser-based media player, identifying root cause in async file handling and enforcing validated upload flows with error boundaries.
- Implemented frame-accurate video-subtitle sync and rebuilt responsive UI with Tailwind CSS, ensuring consistent playback performance across desktop and mobile viewports.

PROJECTS

GATEKEY | API - KEY MANAGEMENT SAAS

NEXT.JS, NODE.JS, EXPRESS, POSTGRES SQL, PRISMA, REDIS, RAZORPAY, RAILWAY, JWT, VERCEL

- Architected **GateKey**, a full-stack SaaS platform for **API key management**, implementing **SHA-256** hashed key generation (show-once pattern), per-key Redis sliding window rate limiting enforcing **Free (60 req/min)** vs Pro (1000 req/min) quotas verified across **37 requests in 30s** under load and a circuit-breaker tripping to **OPEN after 5 consecutive failures** with **10-second HALF-OPEN auto-recovery**, gateway processing **latency under 20ms excluding I/O**.
- Built multi-tenant developer platform with strict per-user data isolation across **4+ test accounts**, **3-step onboarding**, real-time analytics dashboard and **Razorpay** subscription billing with **HMAC-SHA256 webhook signature** verification handling activated, cancelled, halted lifecycle events, deployed on Railway and Vercel with **zero cross-tenant** data leakage.

TASKFLOW | MULTI-TENANT SAAS WITH BILLING

NEXT.JS, TYPESCRIPT, POSTGRES SQL, PRISMA, STRIPE, CLERK, REDIS, RESEND, VERCEL

- Built a **multi-tenant SaaS** platform with **Clerk**-based organization switching and **PostgreSQL** row-level data isolation per tenant; enforced **3** Stripe billing tiers with usage-based limits at the API layer.
- Implemented idempotent **Stripe webhook** handlers for subscription lifecycle events (created, updated, cancelled, past-due) with **automated downgrade** enforcement on failed payments, reducing billing state inconsistencies to zero.

JOURNI | AI-TRIP PLANNER | NEXT.JS, NODE.JS, TYPESCRIPT, POSTGRES SQL, PRISMA, STRIPE, GROK API, REDIS, CLERK

- Architected an **agentic AI itinerary engine** using **Grok's API** with tool-use and function calling, orchestrating real-time calls across **3+** third-party services (flights/hotels, weather, maps) to autonomously generate personalized, editable day-to-day itineraries in under **30s**, serving **5+** generated trips to date.
- Built a **Redis**-backed job queue to process **10-30s** AI generation tasks asynchronously, decoupling long-running requests from the request cycle and reducing perceived latency for users.
- Implemented **Stripe** subscription billing with a **2-tier** (free/paid) pricing model, enforcing usage limits at the API layer via **Clerk**-authenticated sessions.
